

Wire Plugging Schematic

Correctly distinguish Right And Left headphones and wires, as shown.

There are left and right logos on the wire, "L" is on the left, and "R" is on the right. The front of the headset is placed with the silicone sleeve facing left to the left and the silicone sleeve facing to the right, which is the right side.

The correct assembly of the wire is with the needle head and "L R" logo facing up. Do not assemble the pinhead down, and it will harm sound quality.

Point the wire to the plug and push it in until it fits perfectly.

Since the wire is a design that does not easily come off, please be careful when inserting or pulling.
