## WOL Setup Tutorial

Zidoo RTD1619DR models support WOL (Wake on LAN), which can turn on/off Zidoo media player remotely via cell phone. Now this guidance take Z9X for example and show how it works.

1. Install Zidoo Controller APP on cell phone, it will automatically search media player in same LAN, click the media player that you want to access.

2. Choose "accept" on Zidoo media player to finish Authorization.

3.When the media player is standby, find "connect history" on Zidoo Z9X to restart, shutdown or sleep, like the picture shows below.
